

Dear Colleague,

On behalf of the organising committee, I look forward to welcoming you to Melbourne on 15 June 2018 for the Forever Active Knee Forum.

We are very fortunate to have assembled a renowned local and international faculty to deliver what promises to be an innovative conference addressing many of the contemporary aspects of total knee arthroplasty surgery.

The conference will begin with an overview of the history of knee replacement surgery and the evolution of TKA prosthetic design over the past 45 years and it will end with a fascinating look at what the future might have in store for knee replacements.

Topics covered in the agenda will include alignment strategies, surgical delivery and methods of assessing outcome. The rationale for various prosthetic design and the results of different designs of knee replacements will be discussed in an interactive format involving short presentations and extended time for debate and discussion. Surgical demonstration, discussion of complex surgical cases and topics on infection will also be covered.

Industry involvement has allowed us to hold this conference which will be a specialised, educational two and a half day event on total knee arthroplasty addressing the latest scientific rationale on the topics covered. We are confident that all attendees will benefit greatly from the program and we wish you an instructive conference and a pleasant stay in Melbourne.

Best wishes,
